

Onvoix Capability Audit — AssistantBenchmark Use Cases

All 49 jobs on assistantbenchmark.com/use-cases, scored against what I can actually run on this machine

Generated 16 Sep 2026, 04:00 IST

USE CASES 49 full benchmark list	✔ I CAN DO 20 41% — end-to-end today	● PARTIAL 24 49% — one piece missing	● CAN'T DO 5 10% — hard gaps
---	---	---	---

vs Addendum: Meta Muse — how I stack up (useofmuse.com — 100 real community use cases, 16 Sep 2026)

Meta Muse is a consumer phone app (app + WhatsApp + web) built for life admin. Read honestly, it is stronger than me today at exactly the layer where my 5 CAN'Ts live — and weaker where owner control matters.

Where Muse is ahead of me (today)

- **Native Gmail:** tamed a 9,209-message inbox, receipt audits that found a \$100/mo forgotten subscription, caught credit-card fraud Chase missed.
- **Real phone calls:** called Costco service, rescheduled a dentist, called contractors for estimates, updated a car-rental booking — my single hardest gap, Muse does it.
- **Native payments:** paid a parking ticket + \$682 invoice from a photo, booked AND paid complex international flights.
- **Meta ecosystem:** mined saved Instagram/Facebook posts into recipe books and city restaurant guides; reachable on WhatsApp natively.
- **Phone push + connectors:** morning briefings, Peloton class alerts, card/connector integrations.

My path: the email layer is ununlockable via Composio (same 4 CAN'Ts as above). Phone calls stay open. Payments stay owner-gated by design.

Where I'm ahead of Muse

- **Owner-owned machine:** I run on your own box — full desktop control, real 24/7 persistence you can watch live (RDP/screen share), nothing flows to a platform's cloud.
- **Deep automation:** self-hosted scripts + APIs, GitHub (authenticated), custom tunnels, CAPTCHA handling, TOTP 2FA vault — the layer consumer apps don't expose.
- **Depth over breadth:** scripted end-to-end booking flows (proven on EaseMyTrip), coded reports/artifacts like this one, video generation.
- **Honest reliability:** Reuters reported a Muse ticket-monitor silently disabling itself after ~15 minutes; users report it "makes mistakes sometimes". My loops log state in memory and tell you when they stop.

Fair verdict: Muse wins the consumer life-admin layer (email, calls, payments). I win on control, depth, customization and privacy.

Estimate (my honest guess, not verified): of the 100 Muse stories here, I could already do roughly 45% outright, another ~35% with the Composio/login unlocks, and the phone-call slice (~10%) stays out of reach today.

● The 5 I can't do — root causes first

Four of the five share one root cause: no email mailbox connected. One is telephony.

#5 Triage the inbox · #47 Clear junk inbox · #6 Run outreach · #12 Kids' school logistics

Root cause: I have no email account on this machine (Workspace/mailbox is disabled). Nothing can read, sort, draft or send your mail today — so inbox triage, junk cleanup, approval-gated outreach and school-email monitoring are all impossible.

#20 Phone someone for you

Root cause: no dialer, no SIM, no voice channel. I can't place or receive a real phone call — and phone legs also weaken #7 (doctor), #13 (bill haggling), #44 (carrier phone tree).

🔒 No practical unlock on this box. Workarounds I do have: web chats, contact forms, and text via

🔒 Unlock: connect Gmail/Outlook via Composio MCP (I'm ready — just need your Composio API key, then one OAuth click). That flips 3 of these to CAN and gives the 4th its missing half.

WhatsApp Web (browser session).

#17 Think out loud by voice (live)

Root cause: no real-time duplex audio loop. I do have one-way voice: your voice notes → transcription, and my replies → generated speech (tested live). A live phone-style conversation is the missing piece.

🔒 Walkie-talkie mode works today: voice note in, spoken answer out, a few seconds apart.

#10 Watch your agents · #21 Run a bot fleet · #40 Six-bot content desk

Root cause: I'm one agent (two modes + scheduled wakes + shared memory). I coordinate my own work well, but I can't manage a fleet of external bots or see what other agents are doing.

🔒 Partial: I can watch any dashboard by browser on schedule, and play all six "content desk" roles myself, sequentially.

🟡 What unlocks the 24 partials

Ranked by how many use cases each unlock would fix.

1. Email (Composio MCP)

Fully unlocks #5, #6, #12, #47 and the email legs of #13, #14, #18, #29, #46.

Needed from you: Composio API key
(app.composio.dev → Settings → API Keys)

2. Google Calendar

Upgrades #4 (calendar from anywhere) and #35 (conflict watch) to full; improves #19, #43, #48.

Needed: same Composio connection, Google Calendar scope

3. WhatsApp Web session

Gives me text reach to humans on #24 (client intake), #33 (group coordination), #46 (contractor nudges) — without a phone dialer.

Needed: one-time QR scan of your WhatsApp session in my browser

4. Payments (you, at the last step)

Converts "to checkout" into "ordered" on #31 (drops), #37 (lunch), #23 (furniture) and every booking. By design I stop before paying; your UPI PIN is the trigger.

Needed: nothing new — just be around to approve

All 49

✅ Can

🟡 Partial

❌ Can't

Search use cases...

49 of 49 shown

1. Check in and get the boarding pass

✅ CAN

Airline web check-in by browser (I run heavier form + CAPTCHA flows daily), download the BP PDF, send it to you on Telegram. Needs PNR + your airline login if the site demands it.

🔒 Mobile-wallet pass: no.

2. Book a flight with points

🟡 PARTIAL

Award-space hunting is doable by browser, but loyalty engines are bot-hostile and need your airline login + points account. Cash booking I've already proven end-to-end; points redemption = best-effort shortlist.

 [Your loyalty login + patience](#)

3. Book flights for the family

 CAN

Proven: I scripted an EaseMyTrip booking search → fare → travellers → payment page. You approve and pay by UPI PIN at the end.

 —

4. Add events to your calendar from anywhere

 PARTIAL

I keep my own reminder calendar (Telegram pings fire on time — tested). Voice note → transcript → event works. Your personal Google Calendar isn't connected, so I can't write onto your phone calendar yet.

 [Composio → Google Calendar](#)

5. Triage the inbox

 CAN'T

No mailbox on this machine (Workspace disabled). Nothing reads your email today.

 [Composio + Gmail OAuth](#)

6. Run outreach, you approve every send

 CAN'T

Needs inbox + CRM access; neither is connected. The approval-queue part could run over Telegram once email is wired.

 [Composio email + CRM MCP](#)

7. Book a doctor or dentist appointment

 PARTIAL

Web booking portals, new-patient forms, insurance fields — all fine by browser. Most Indian clinics run on phone calls or WhatsApp; I can't dial.

 [WhatsApp Web covers part](#)

8. Ship website or app changes by text

 CAN

GitHub is already authenticated on this machine and I have a full coding environment. Tell me repo + change; I edit, push, deploy and verify.

 —

9. Set guardrails before giving it your inbox

 PARTIAL

No third-party guardrail product (Superagent) installable here, but I have built-in ask-first rules: irreversible actions need your OK and I don't obey instructions embedded in third-party messages. Happy to demo what I'd block.

 [Policy doc we agree on](#)

10. Watch what your agents are doing

 PARTIAL

I patrol this machine on a 30-min heartbeat and can watch any dashboard by browser on schedule. Seeing OTHER external agents' internals — no.

 —

11. Make an image or a game in the chat

 CAN

Image, music and video generation already tested live on this machine. HTML games I build, zip and send as files, or host with a public link.

 —

12. Run the kids' school and activity logistics

 CAN'T

Needs school-portal + email monitoring; neither is connected. The calendar-invite half works today.

 [Composio email + portal creds](#)

13. Cut a bill or switch provider

 PARTIAL

I can research, compare contracts and draft the switch request online. Actual haggling runs on phone calls or your email — my two missing channels.

 [Email unlock; calls impossible](#)

14. Find every recurring charge

 PARTIAL

No bank/card access. Export your statement (CSV/PDF) and I'll itemize every subscription with costs and increases. Live inbox scan needs the email unlock.

 [Statement file / email](#)

15. Shop for insurance

 CAN

Quote comparison (PolicyBazaar etc.) via browser with your current policy details; CAPTCHAs handled. Closing calls are your part.

 [Your current policy doc](#)

16. Run a week of errands

 PARTIAL

Online errands yes: orders parked at checkout, forms, faxes via an online-fax service. Anything physical (pickups, hardware) is out.

 [You at payment steps](#)

17. Think out loud by voice

● PARTIAL

Walkie-talkie works today: your voice note → I transcribe → I reply with generated speech (both tested). A live two-way call I cannot hold.

18. Win a refund a company refused

● PARTIAL

Support chats and web complaint forms I can drive. Reading/writing your email thread needs the email unlock; calls are out.

Email unlock

19. Turn meeting transcripts into follow-ups

● PARTIAL

Drop me transcripts or audio: I transcribe, extract action items, set evening reminders. Auto-pulling from Granola/Notion needs that app's API.

App API/MCP or file drop

20. Phone someone for you

● CAN'T

No dialer, no SIM, no voice channel. Hardest gap on this list.

None practical

21. Run a team of agents

● PARTIAL

I'm one agent with two modes, scheduled wakes and shared memory — I coordinate my own work streams well. Managing an external fleet of ten bots, no.

22. Build a tracker or a page by describing it

✓ CAN

I design and build HTML dashboards, host them with a public link, keep data in local files, and can hold logs in my vault with your OK.

23. Order furniture and book assembly

● PARTIAL

Ordering to checkout: yes (IKEA India ships; you pay). TaskRabbit-style assembly booking barely exists online in India — that last mile is offline.

Local handyman contact

24. Handle client intake through to booking

● PARTIAL

I can run intake → quote → negotiate → book inside any chat I can see. Today that's your Telegram chat; WhatsApp Web via your browser session extends reach.

 [WhatsApp Web session](#)

25. Plan a whole trip

✓ CAN

Research + book trains (IRCTC), hotels, dinners, show tickets via browser; you pay at the end. CAPTCHAs handled.

 [IRCTC login if train travel](#)

26. Apply for a visa

✓ CAN

Refundable bookings, application forms, document organization, day-by-day itinerary — all my wheelhouse. You supply statements/scans; uploads happen by browser since I can't email.

 [Your documents](#)

27. Book a DMV appointment and prep paperwork

✓ CAN

Slot booking + document checklist + form fill by browser — US DMV sites, or the Indian equivalent (Parivahan/RTO).

 —

28. Run a launch day

✓ CAN

Product Hunt watching + comment replies by browser with your login; hourly Telegram updates; Slack via browser or MCP.

 [PH + Slack logins](#)

29. Send a PDF to your Kindle, reflowed

● PARTIAL

Reflowing I can do (clean HTML/EPUB). Delivery: Amazon Send-to-Kindle web upload with your Amazon login. The classic email-to-Kindle path needs an email account.

 [Email unlock / Amazon login](#)

30. Watch fares and rebook when better

✓ CAN

Scheduled fare checks (I already track your flight), Telegram alerts the moment a fare dips, rebook through the same scripted flow on your OK.

 —

31. Buy a clothing drop

● PARTIAL

I can hammer the page in a tight loop the instant it opens with your card/UPI. Waiting-room queue systems may still beat a bot; no guarantees on limited drops.

 [Vaulted card + luck](#)

32. Reorder a product, stop before paying

✓ CAN

This is exactly my proven flight pattern: fill everything, park at checkout, ping you to approve. Benchmark says most assistants stall at login — mine already didn't.

33. Coordinate a meeting in a group chat

 PARTIAL

I can read/write chats I'm in (your Telegram; WhatsApp Web by browser session). Other people's calendars stay invisible to me.

[WhatsApp session](#)

34. Rent a car

 CAN

Zoomcar/Revv via browser (Turo isn't in India); filter by dates/price/pickup, book, you pay.

35. Catch a scheduling conflict before it bites

 PARTIAL

Conflicts inside the calendar I manage: checked on every heartbeat. Your personal Google Calendar isn't connected, so I can't see the events you add yourself.

[Google Calendar via Composio](#)

36. Plan a study schedule for a test

 CAN

Plan sessions by hours and weak sections, quiz you on schedule over Telegram, track scores and adapt the plan.

37. Order lunch

 PARTIAL

Swiggy/Zomato via browser is possible but their web flows are app + OTP gated — too fragile to promise your usual by 12:30.

[Better web flows or an API](#)

38. Review claims for fraud on a schedule

 CAN

I run scripts and API pulls on schedule on this machine (dub.co API + your logs), remove fraud and approve real claims per your standing rule, ping you on judgment calls.

[API keys for your stack](#)

39. Run ads, leads and meetings (self-hosted)

 CAN

I AM the self-hosted agent: Meta Ads by browser, Sheets via browser/API, Canva check, Calendly invites, all on a morning loop with your logins.

[Ad account + Calendly logins](#)

40. Run a content desk

🟡 PARTIAL

All six roles (research, write, design, schedule, edit, report) I can perform as one very organized agent with memory. Six truly separate bots, no.

41. Run ads with a rule it must not break

✅ CAN

Build creatives (image gen + your assets), launch via Ads Manager with your login, check ROAS every 30 min, pause anything under the floor, show you first.

[Meta login + your ROAS floor](#)

42. Build Magic decks from cards you own

✅ CAN

Export your ManaBox collection file, I cross-reference the EDHREC meta and build within your cards. Pure data work — my favourite kind.

[Collection export file](#)

43. Sell tickets for games you'll miss

🟡 PARTIAL

I watch the calendar I manage and can list tickets on resale sites, but India lacks a StubHub-class fan exchange; outcomes are patchy.

[Calendar + a marketplace that works](#)

44. Chase a missing delivery

🟡 PARTIAL

Carrier web chat and email escalation I can run end-to-end. The phone-tree part I cannot — no dialer.

[Email unlock](#)

45. Find an apartment and apply

🟡 PARTIAL

Search + shortlist by your criteria on 99acres/NoBroker, verify listings (no hallucinated flats), draft applications. Actual apply usually needs your OTP + a site visit.

[Your OTP at apply time](#)

46. Keep a home remodel moving

🟡 PARTIAL

Monday check-in reminder fires reliably. The nudge message itself needs a channel I can send on — email (no) or WhatsApp Web (possible).

[WhatsApp Web session](#)

47. Clear out a junk inbox

🔴 CAN'T

Same root cause as #5: no mailbox connection today.

48. Find events worth going to and book them

✓ CAN

Weekly scan of the sites you pick against free time, register via browser, confirm to Telegram.

49. Book a hotel with free cancellation

✓ CAN

Search + free-cancel filter + book or hold by browser; pay-at-hotel or your UPI at the end. Proven territory for me.
